

Palazzo Borromeo, Milan, 8 June 2022

**French company Nardone Automotive presents its own interpretation of the Porsche 928 in a world preview during Milan Design Week.**

**The 928, since its debut in 1978,** has always been an unconventional car, completely different from all the others: there was no similar model in the Porsche range before and, after winning the Car of the Year title, it remained part of their model range for 17 years, selling a total of over 60,000 units. Until now it has never been succeeded, bit of a shame, wouldn't you agree?

**The class of the Porsche 928,** with its elegance, its smooth and ultra-modern style could not remain in the past, as if suspended in time. It is for this reason that Thierry Nardone, a sophisticated and expert car guy, with a visceral passion for "transaxle" Porsches, imagined a 928 that could once again express the full potential of the values and characteristics that had defined and shaped it. Almost 45 years earlier: a refined and exciting GT that combines comfort, performance and contemporary luxury.

**Today, Nardone Automotive offers** a series of changes to the Porsche 928 to transform it into a special and tailor-made GT. The bodywork, with muscular fenders, is made almost entirely of composite materials, the front and rear lights have been specifically designed and built, the new, forged 18-inch wheels equipped with Michelin Pilot Sport 5 tires are a modern interpretation of the old 'manhole' 16" wheel.

The interior has been completely revised and welcomes Foglizzo leather and Alcantara. The infotainment now incorporates the Porsche Classic Management system (PCCM) combined with a luxury Hi-Fi system and Apple CarPlay.

From a technical point of view, the 928 from Nardone Automotive relies on the classic eight-cylinder V-aspirated engine targeted to output 400bhp. Managed by a modern engine control unit and coupled to the original 5-speed manual gearbox, now modified to a 6-speed manual with a limited-slip differential. Finally, the chassis setup utilises redesigned front and rear axle and spindle, active controlled electronic suspension, increased brakes and adaptive electric power steering.

After Milan Design Week, Nardone Automotive's 928 will once again be in the spotlight at one of the most anticipated automotive events of the year, the Goodwood Festival of Speed, from 23 to 26 June, in England.

The first deliveries of the 928 by Nardone Automotive are expected in 2024.

## The main features:

- Fully upgraded with target 400 bhp engine;
- Modern ECU;
- Gearbox converted from 5 to 6 speeds with limited-slip differential.
- Redesigned front and rear axle and spindle
- Active controlled electronic suspension
- Electric power steering with variable action according to speed;
- New 18-inch forged wheels;
- Increased braking system;
- Carbon fiber bodywork;
- Completely redesigned interior;
- Luxury Audio Hi-Fi system with Porsche Classic Management System (PCCM) and Apple CarPlay.

# NARDONE

**To make his dream come true**, Thierry Nardone has surrounded himself with a series of partners of the highest level, true professional masters in the fields of design, interior cladding, engineering, engine development and chassis and transmissions, united by a common driving force to create something unique and extraordinary together: Studio BorrromeodeSilva in Milan and Podium Advanced Technologies in Pont St. Martin (AO), the same companies that designed and built the Amos Futurista Automobiles.

## NARDONE

**Nardone Automotive** is a French start-up based in Aix-En-Provence that operates in the non-conservative restoration sector: the restomod of the Porsche 928 is its first product. The founder, Thierry Nardone, 38, is a great car enthusiast and has always cultivated a deep passion for the so-called “transaxle” Porsche, which he is serenely obsessed with.

## BorrromeodeSilva

**BorrromeodeSilva** is a design company with extensive international experience, founded in 2011 in Milan by Carlo Borrromeo, Fabio de Silva and Filippo Sgalbazzi. The studio mainly deals with mobility design, ranging from research and development to complete industrialization, as well as branding and strategic communication in the automotive sector.

## P O D I U M

**Podium Advanced Technologies** is a young and dynamic company founded in 2011, rooted in renowned automotive and international motorsport culture. Its core business is the design and integration of automatic mechanical and electronic systems.
